PISP Progress Update

Mid PI 11 - September 2020

PI11 Objectives

- 1. End to End Transfers Flow at the switch
- 2. Scheme Adapter + Mojaloop Simulator implementation for E2E Transfers
- 3. Fully Implemented Auth Service
- 4. Account Linking flow at Switch
- 5. Working MojaPay PISP Demo App

P111 Objectives

- 1. En95%rcomplete Flow at the switch
- 2. Scla5% complete jaloop Simulator implementation for E2E
- 3. Ful95%completeuth Service
- 4. AcBackloging flow at Switch
- 5. W80% complete Deongoing

Pl11 Objectives

1. End to End Transfers Flow at the switch

Remaining Work:

- Transaction callback to PISP

P111 Objectives

2. Scheme Adapter + Mojaloop Simulator implementation for E2E Transfers

Remaining Work:

- Porting of sdk-scheme-adapter functions to new thirdparty-scheme-adapter
- Writing E2E tests

PI11 Objectives

3. Fully Implemented Auth Service

Remaining Work:

- Integration tests
- Minor FIDO registration modifications

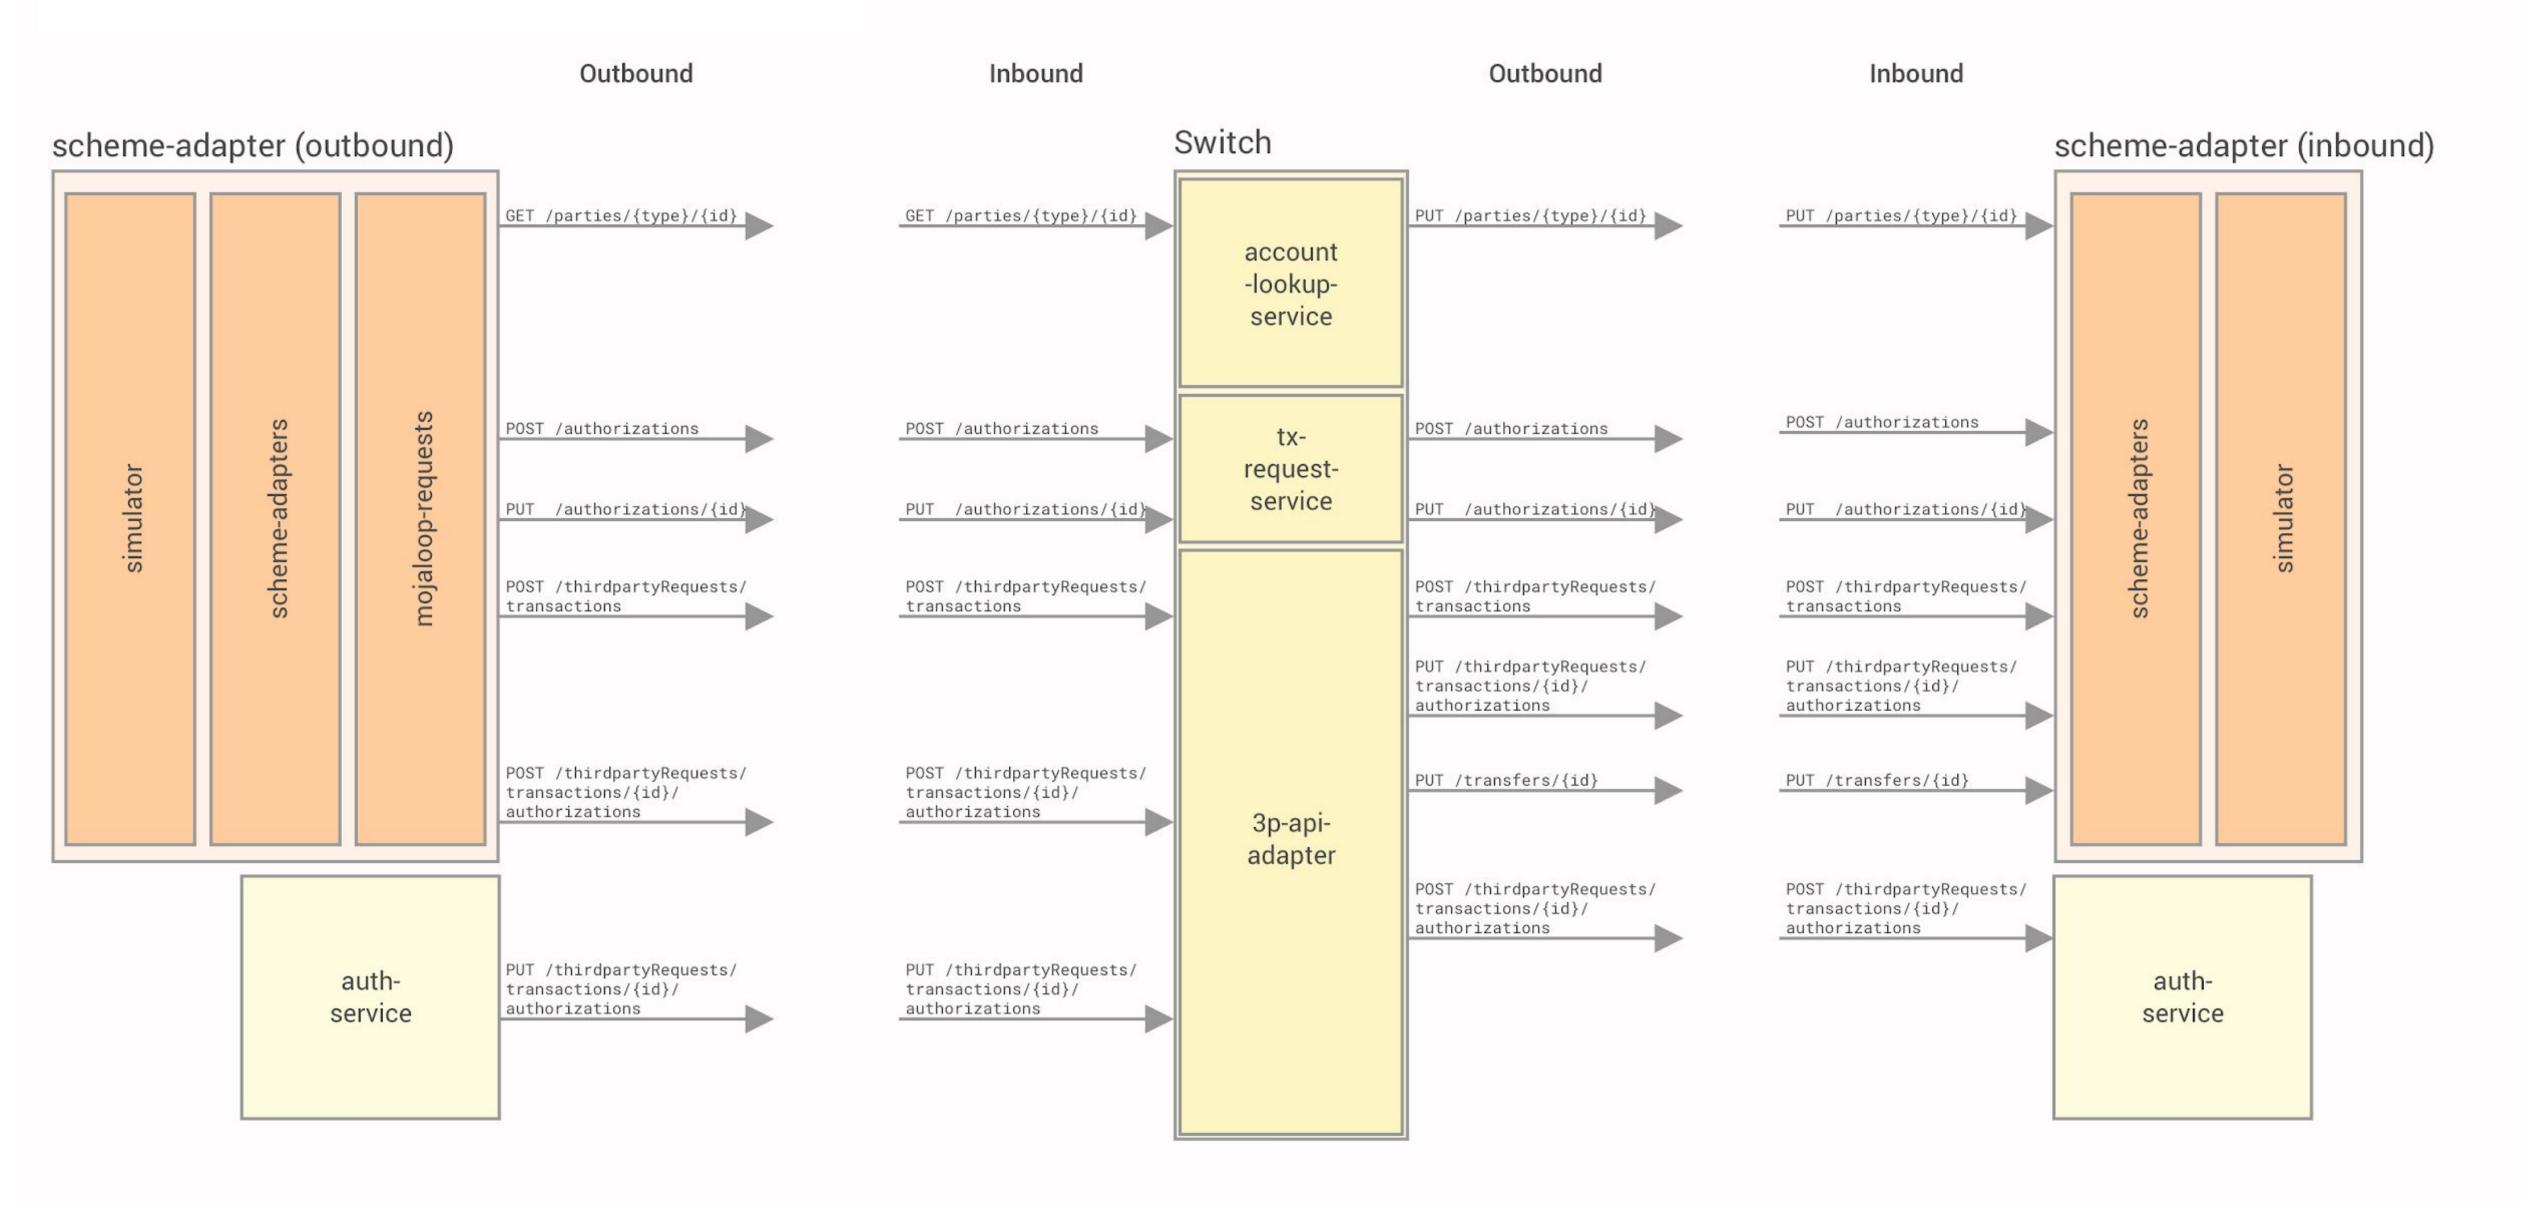

P111 Objectives

5. Working MojaPay Demo App

Remaining Work:

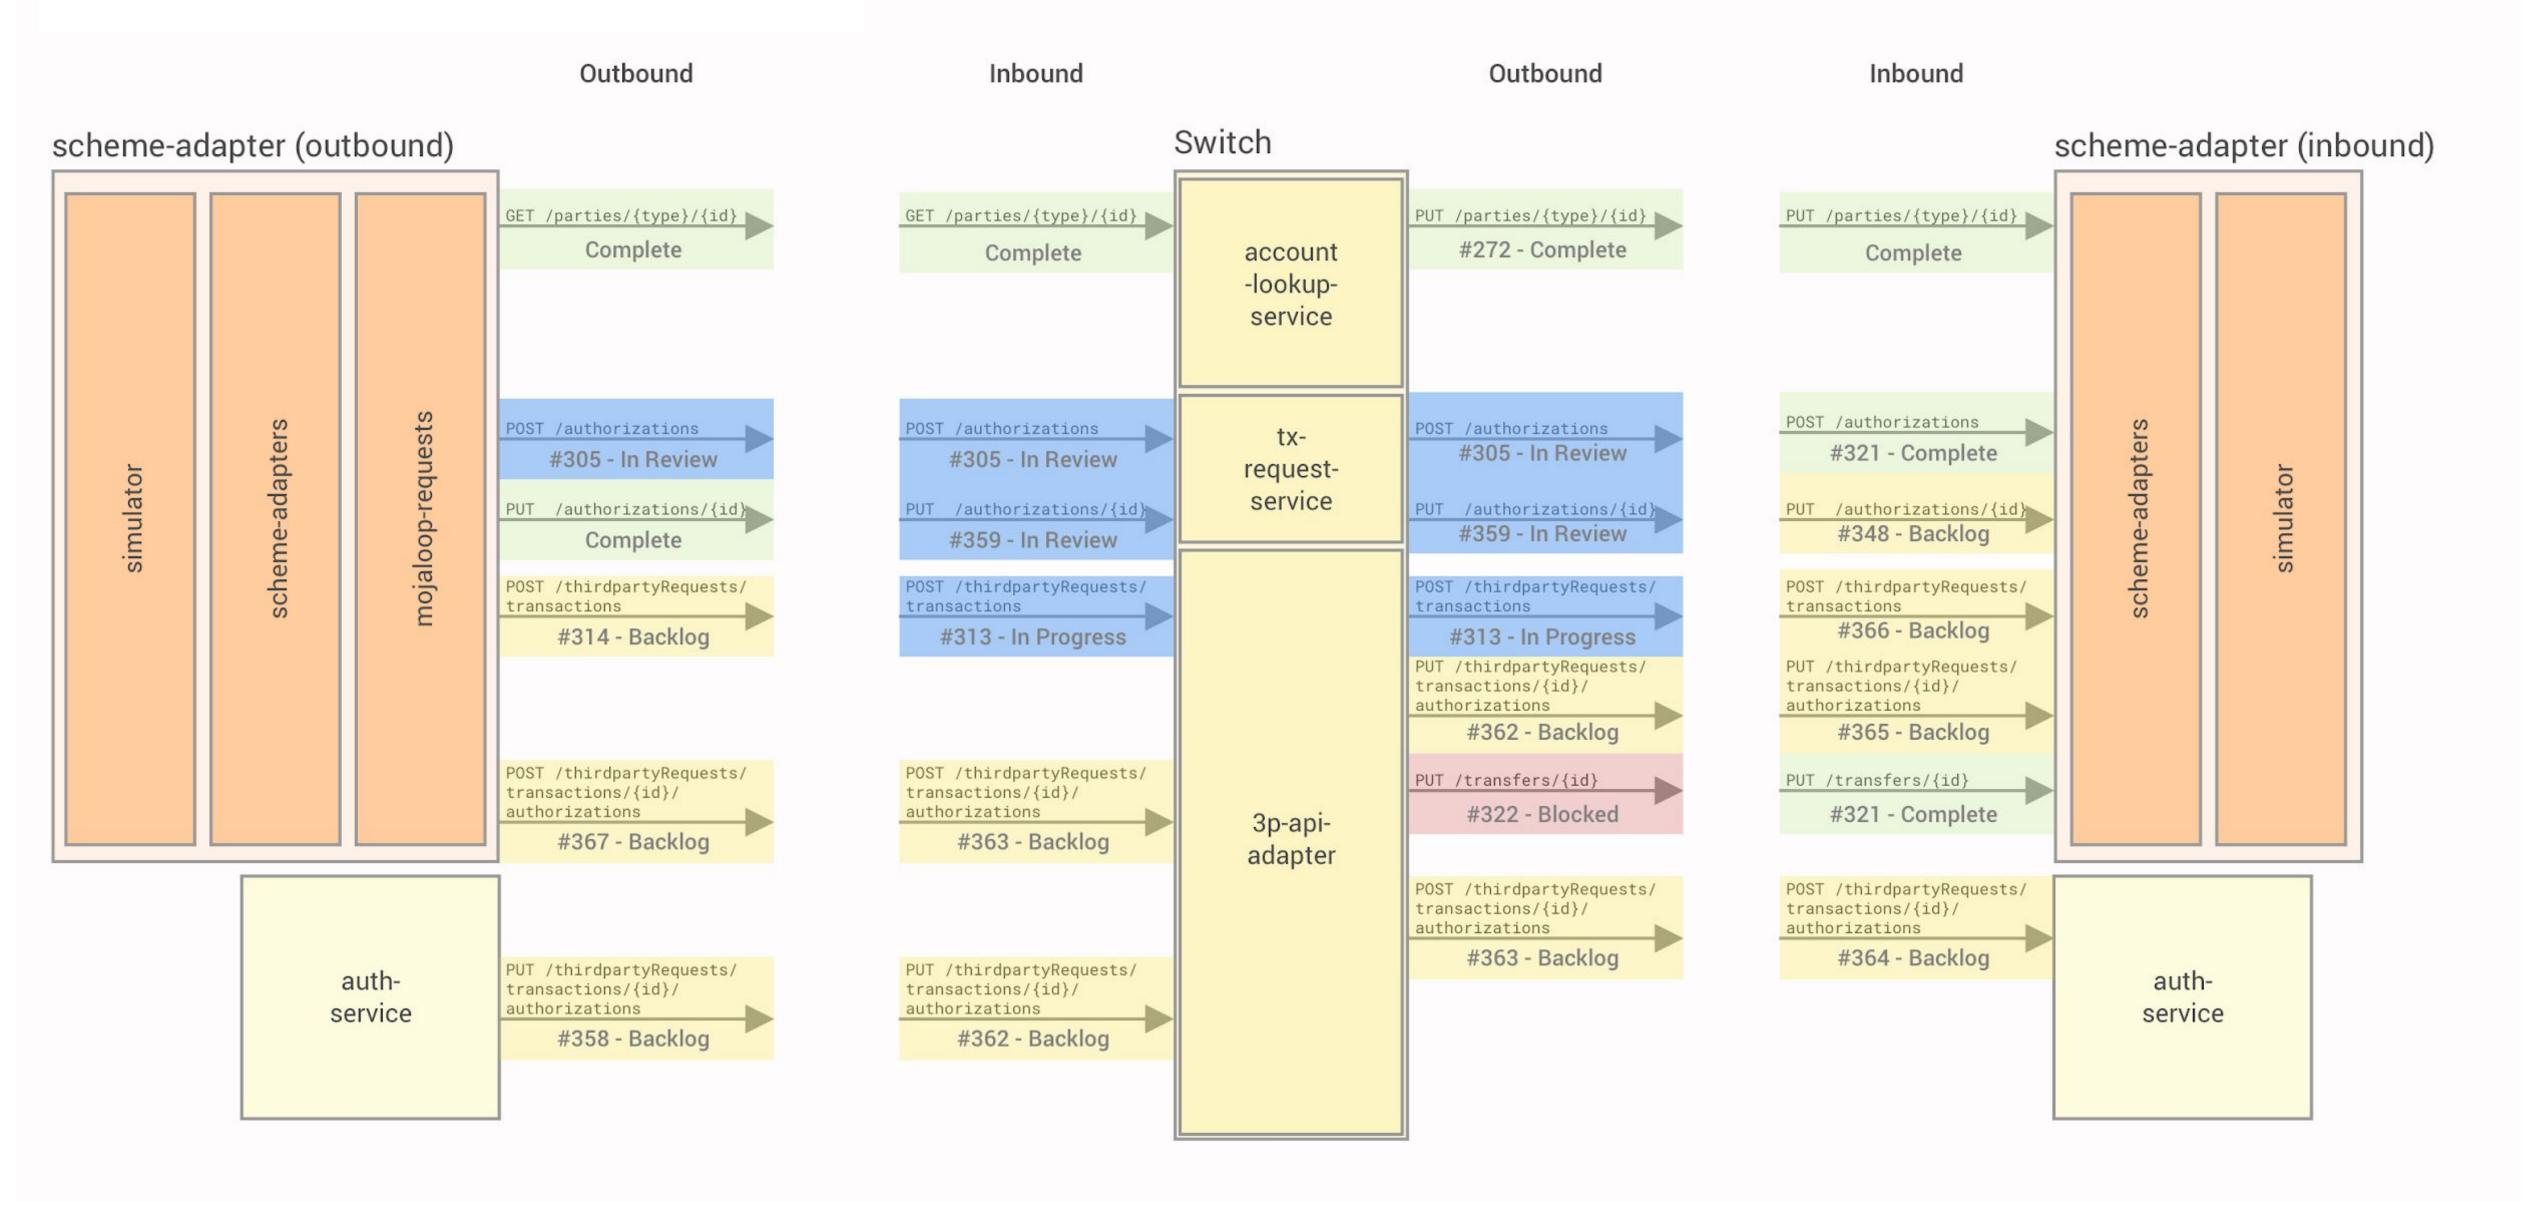

- Connect account linking with testing-toolkit

Linking End To End - Goal for PI 11

3rd Party Callback Design

3rd Party Callback Design

Challenge: How do we allow interested parties to listen in to events that are happening inside the switch?

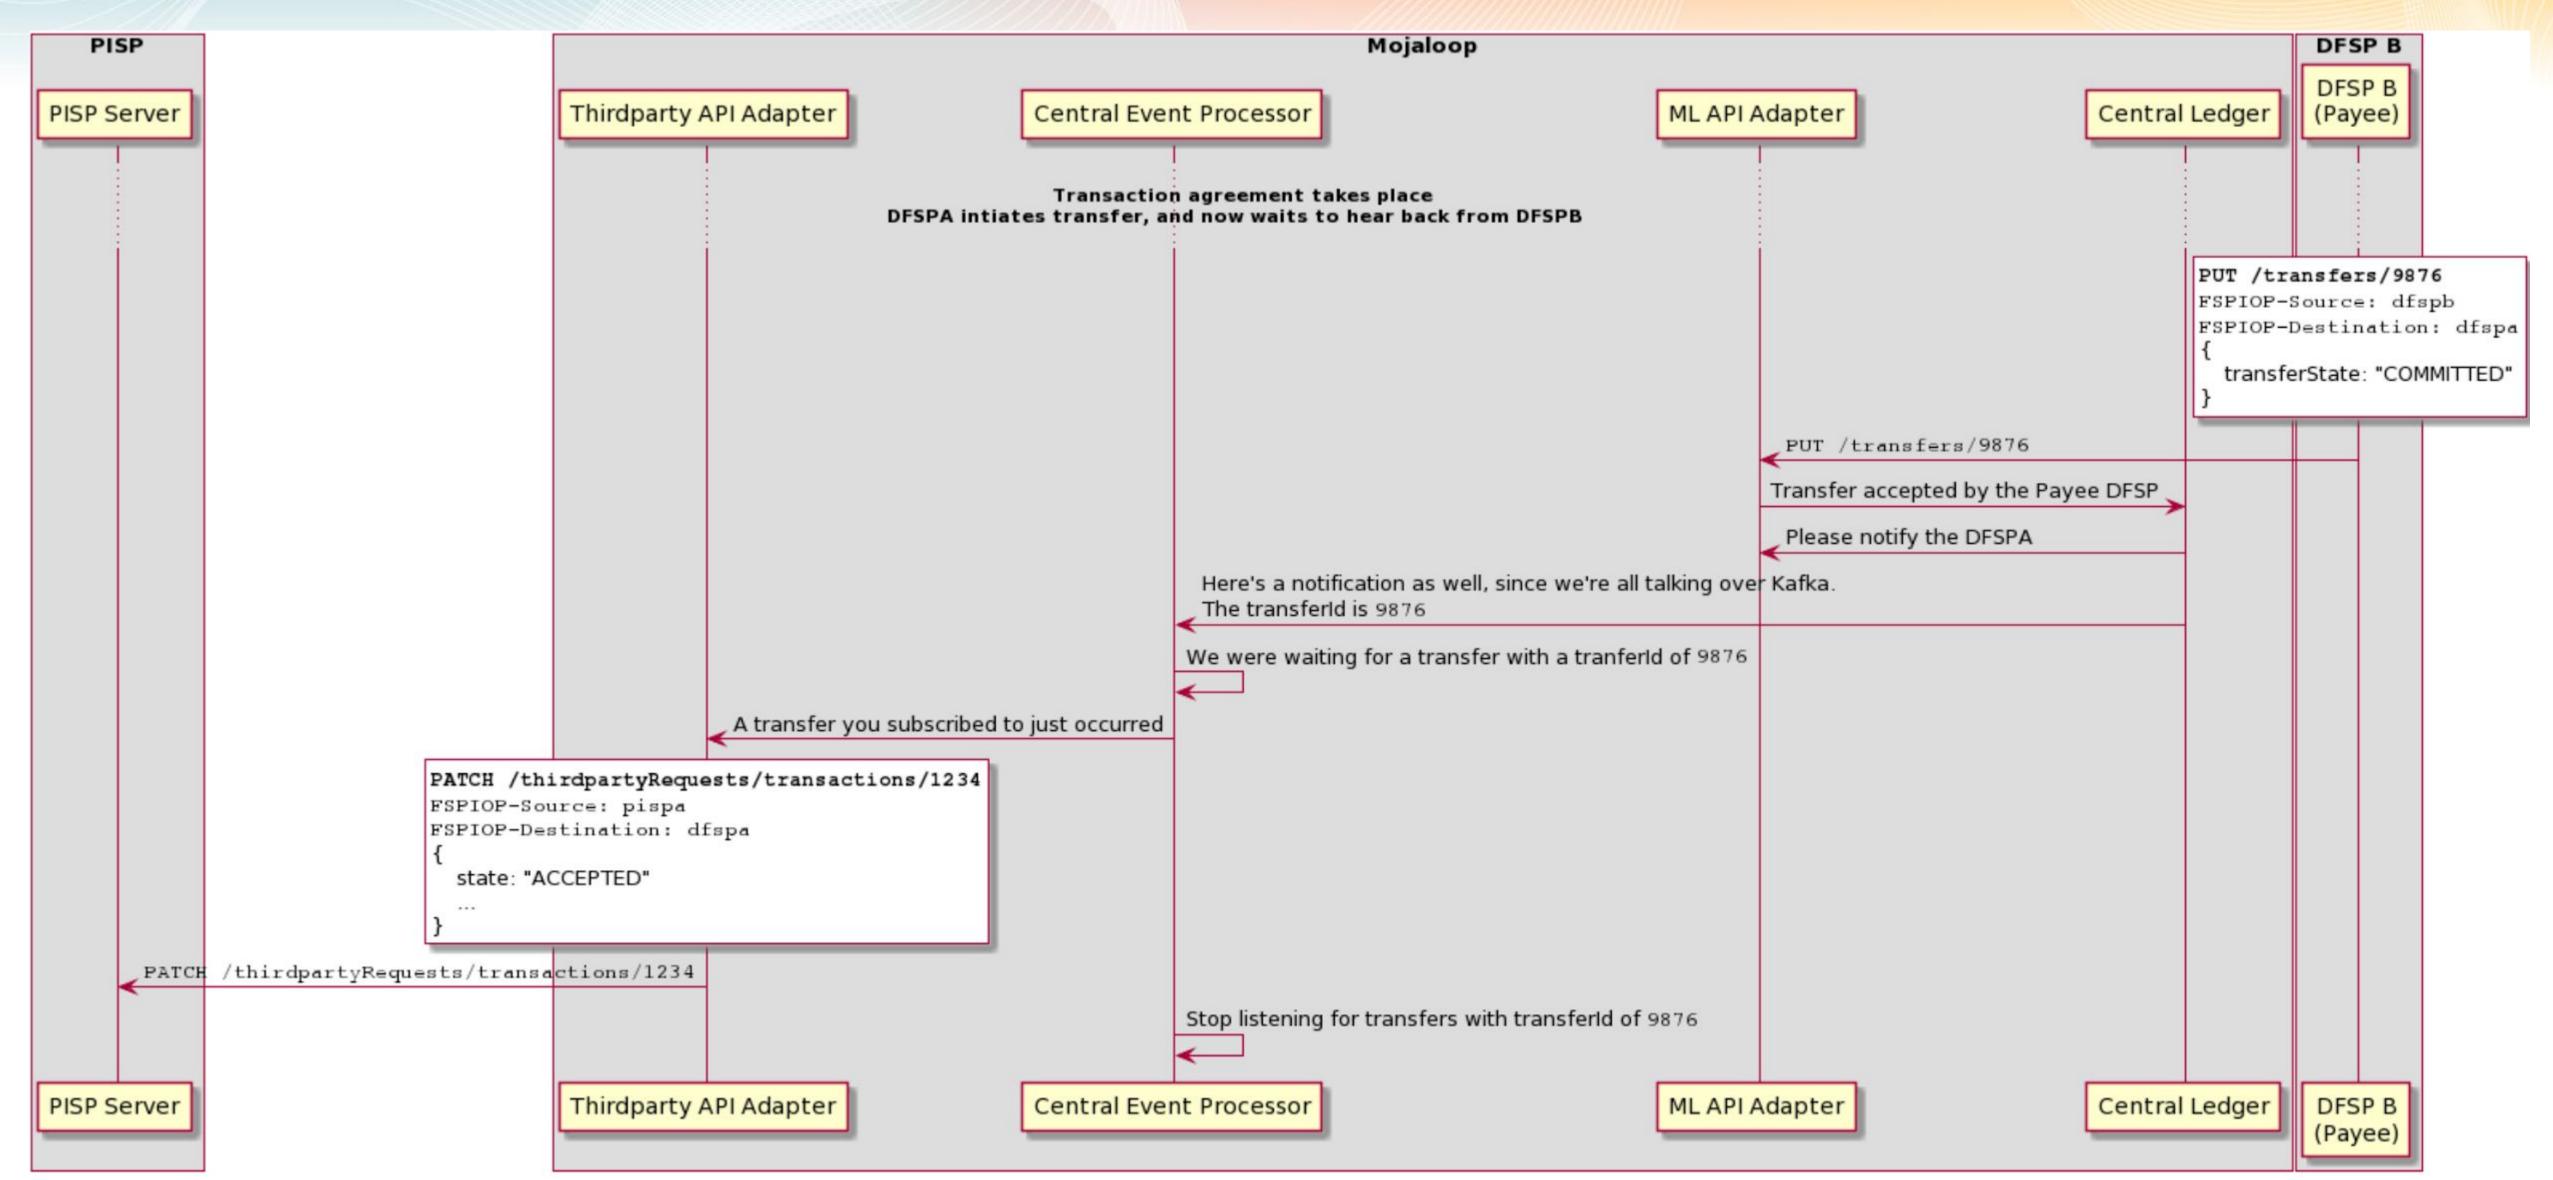

In this case, how do we inform a PISP of a completed transaction?

When the central-ledger emits a Notify Fulfil event,

Then send a PATCH /thirdpartyRequests/transactions/{id}

Ref: https://github.com/mojaloop/pisp/tree/master/docs/transaction-callback

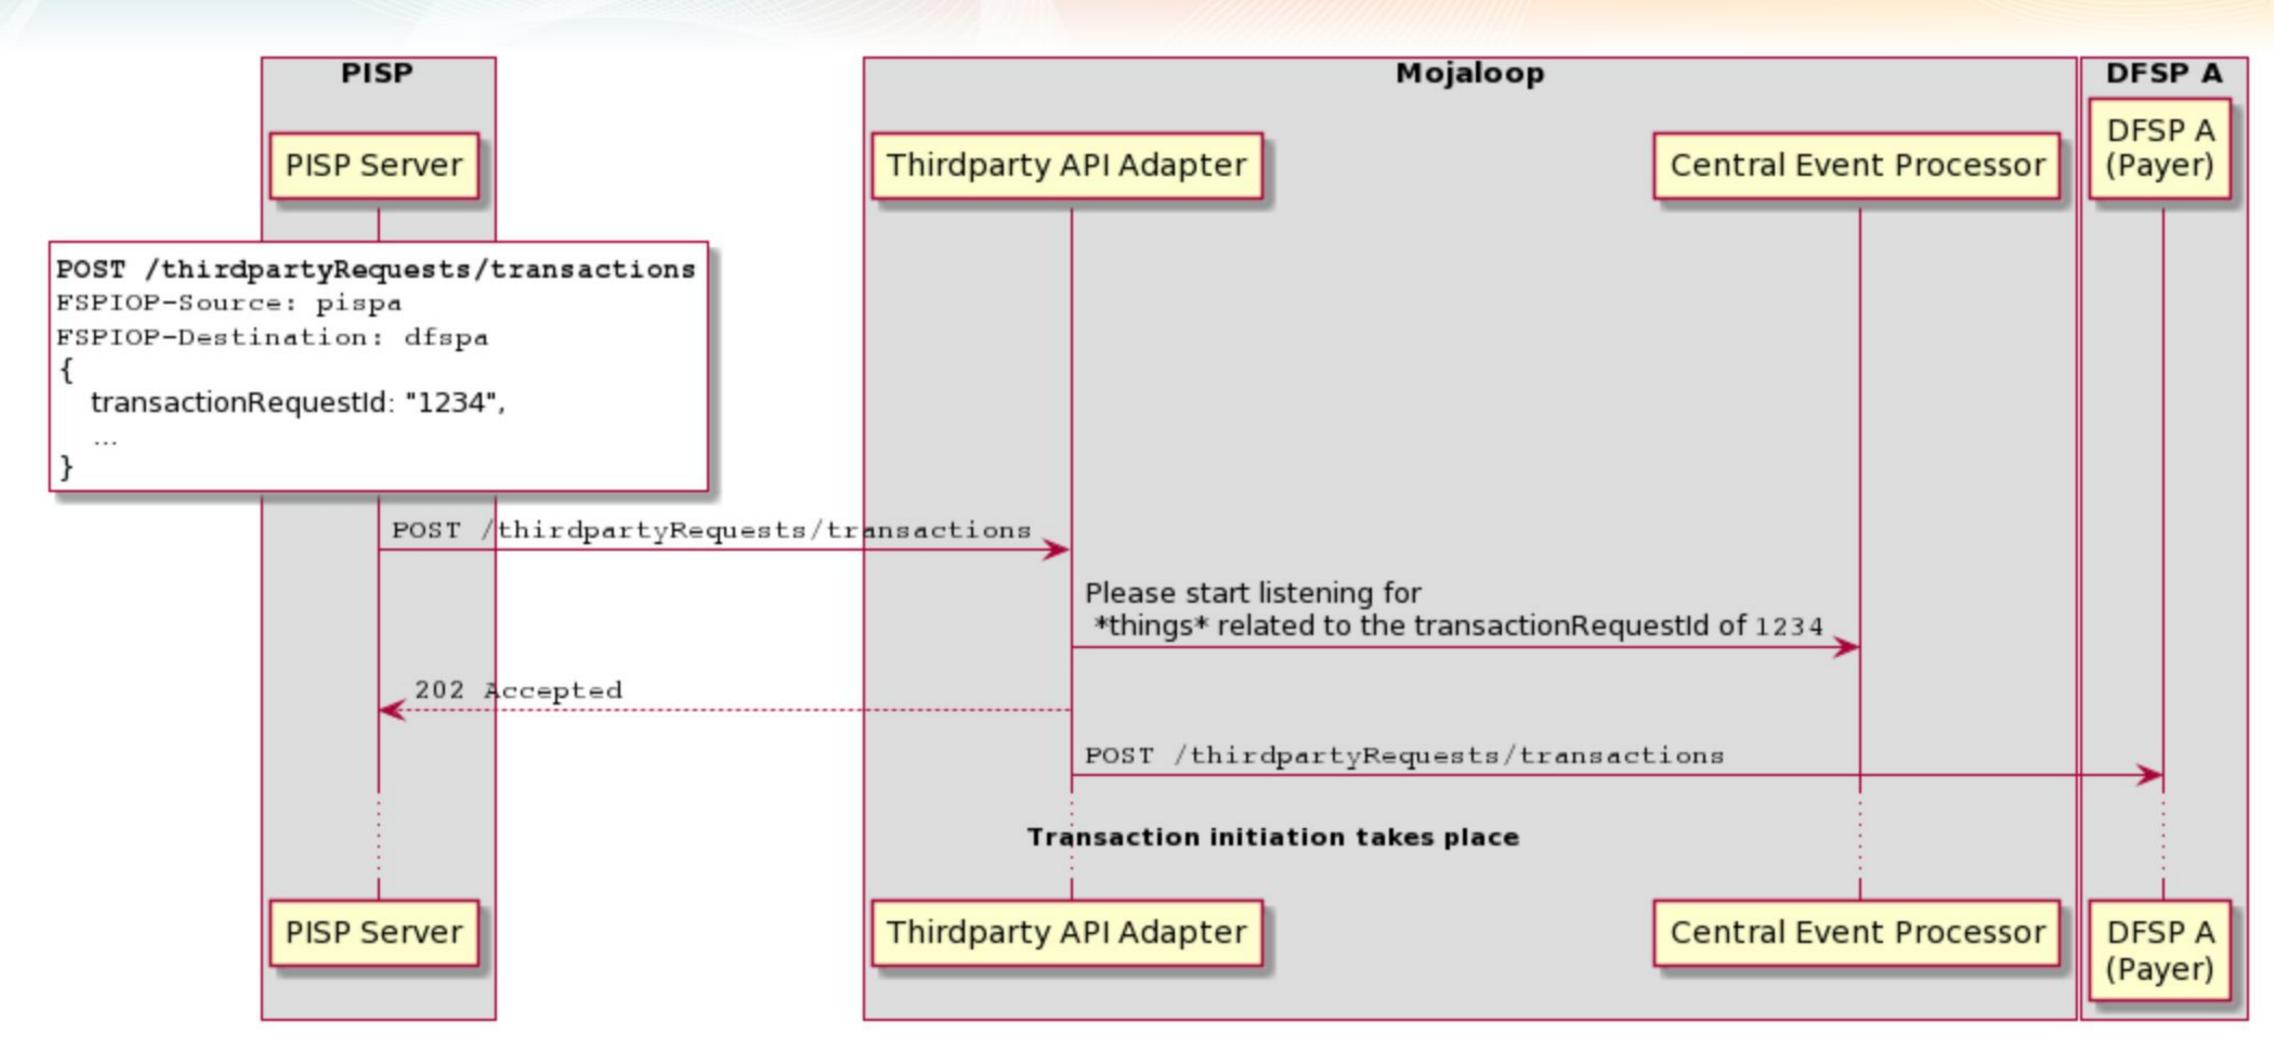

3. Final Transaction Notification

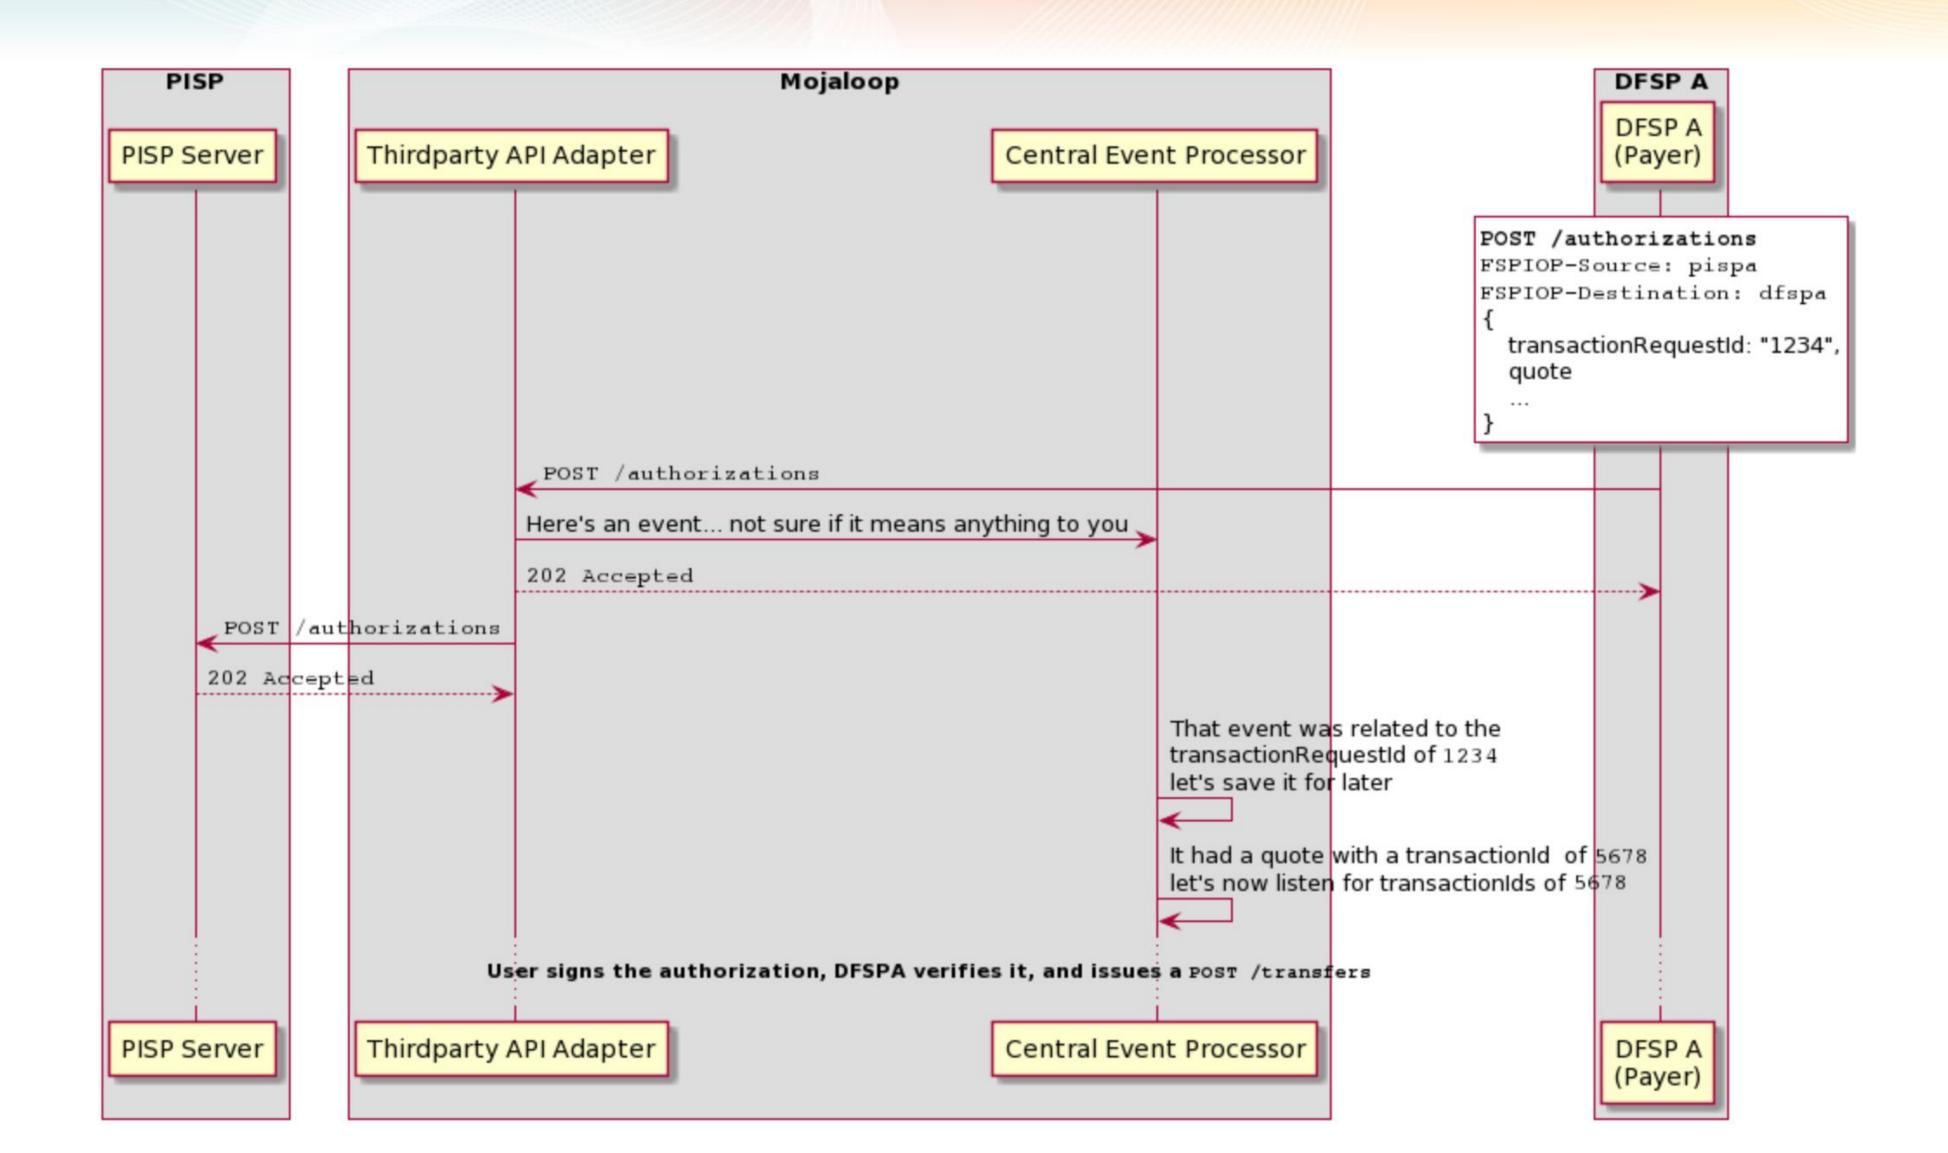

Final Transaction Notification

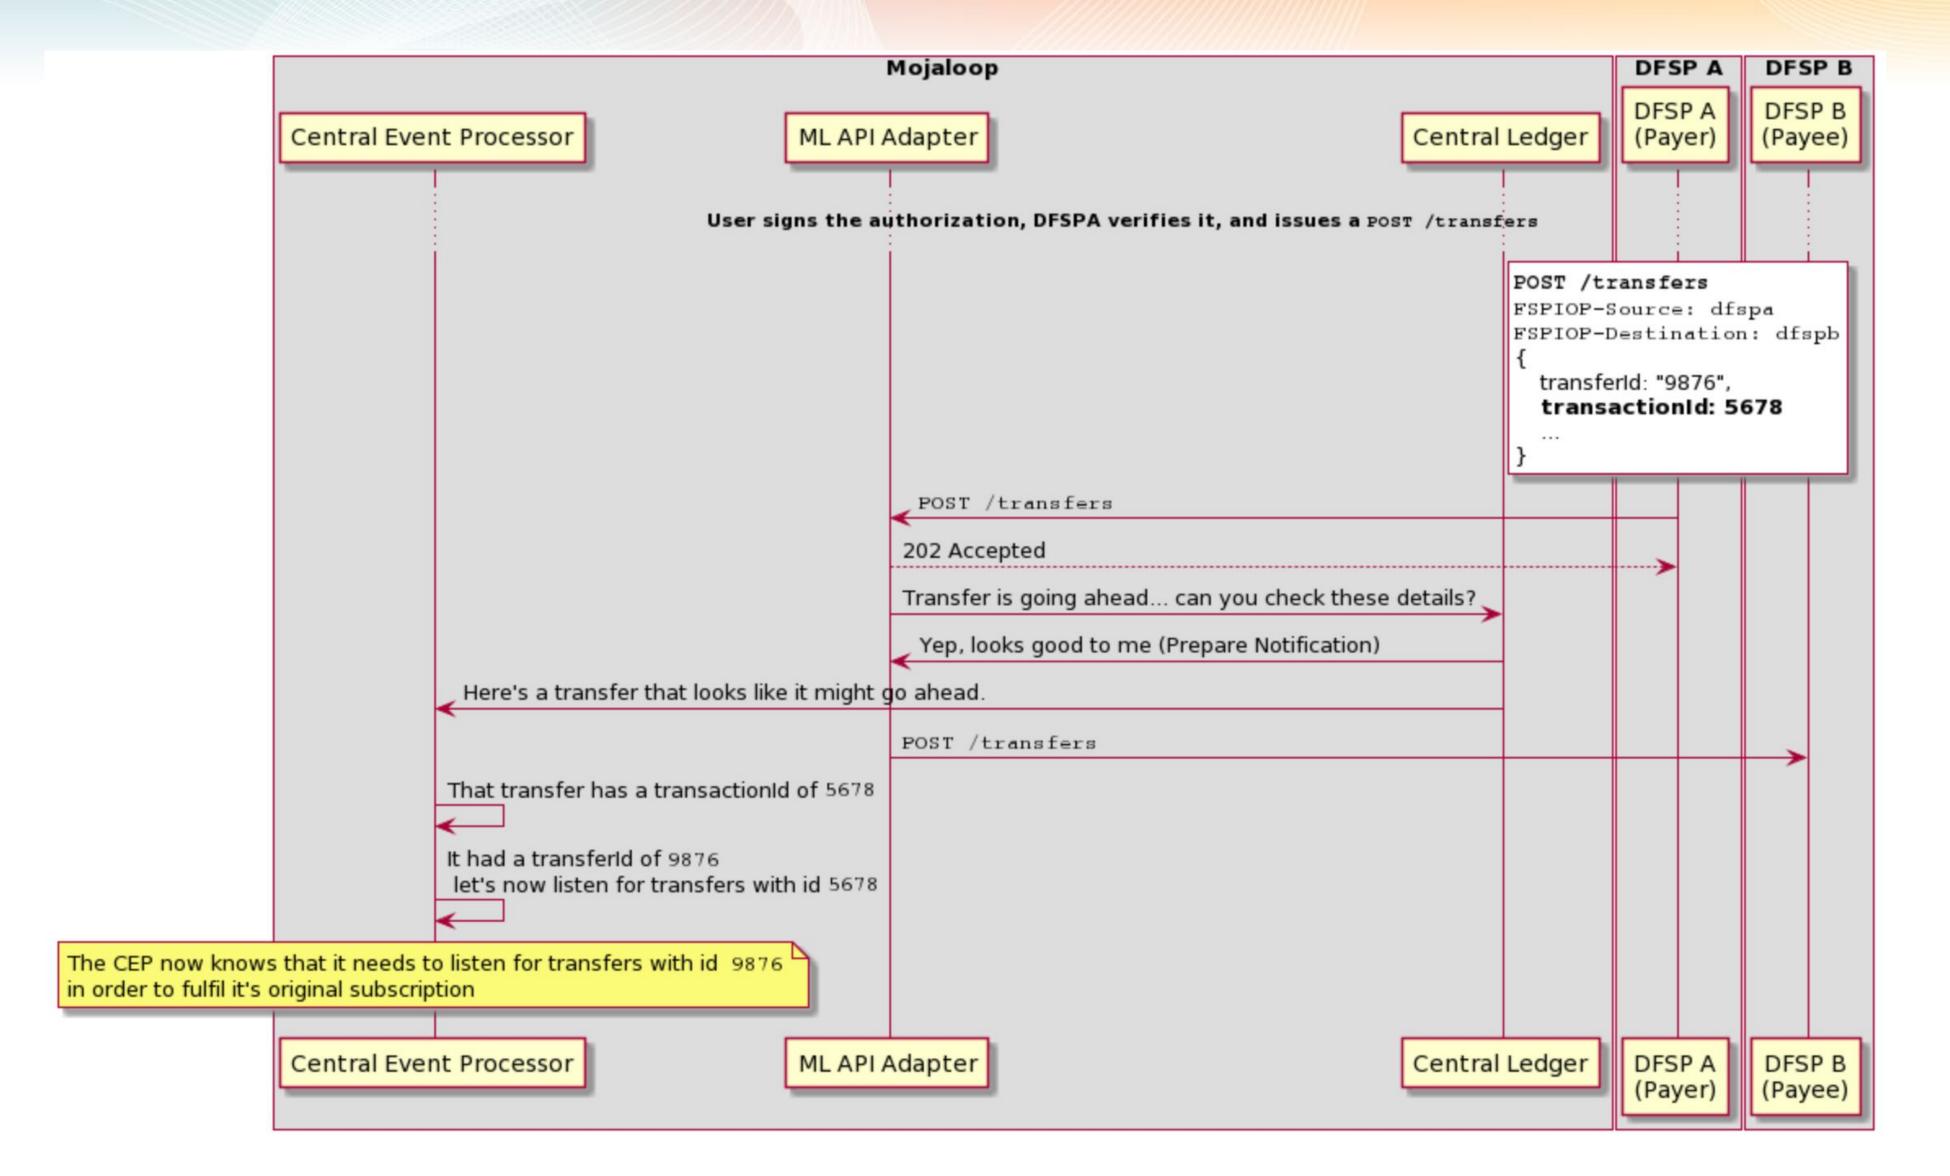

1. Subscription

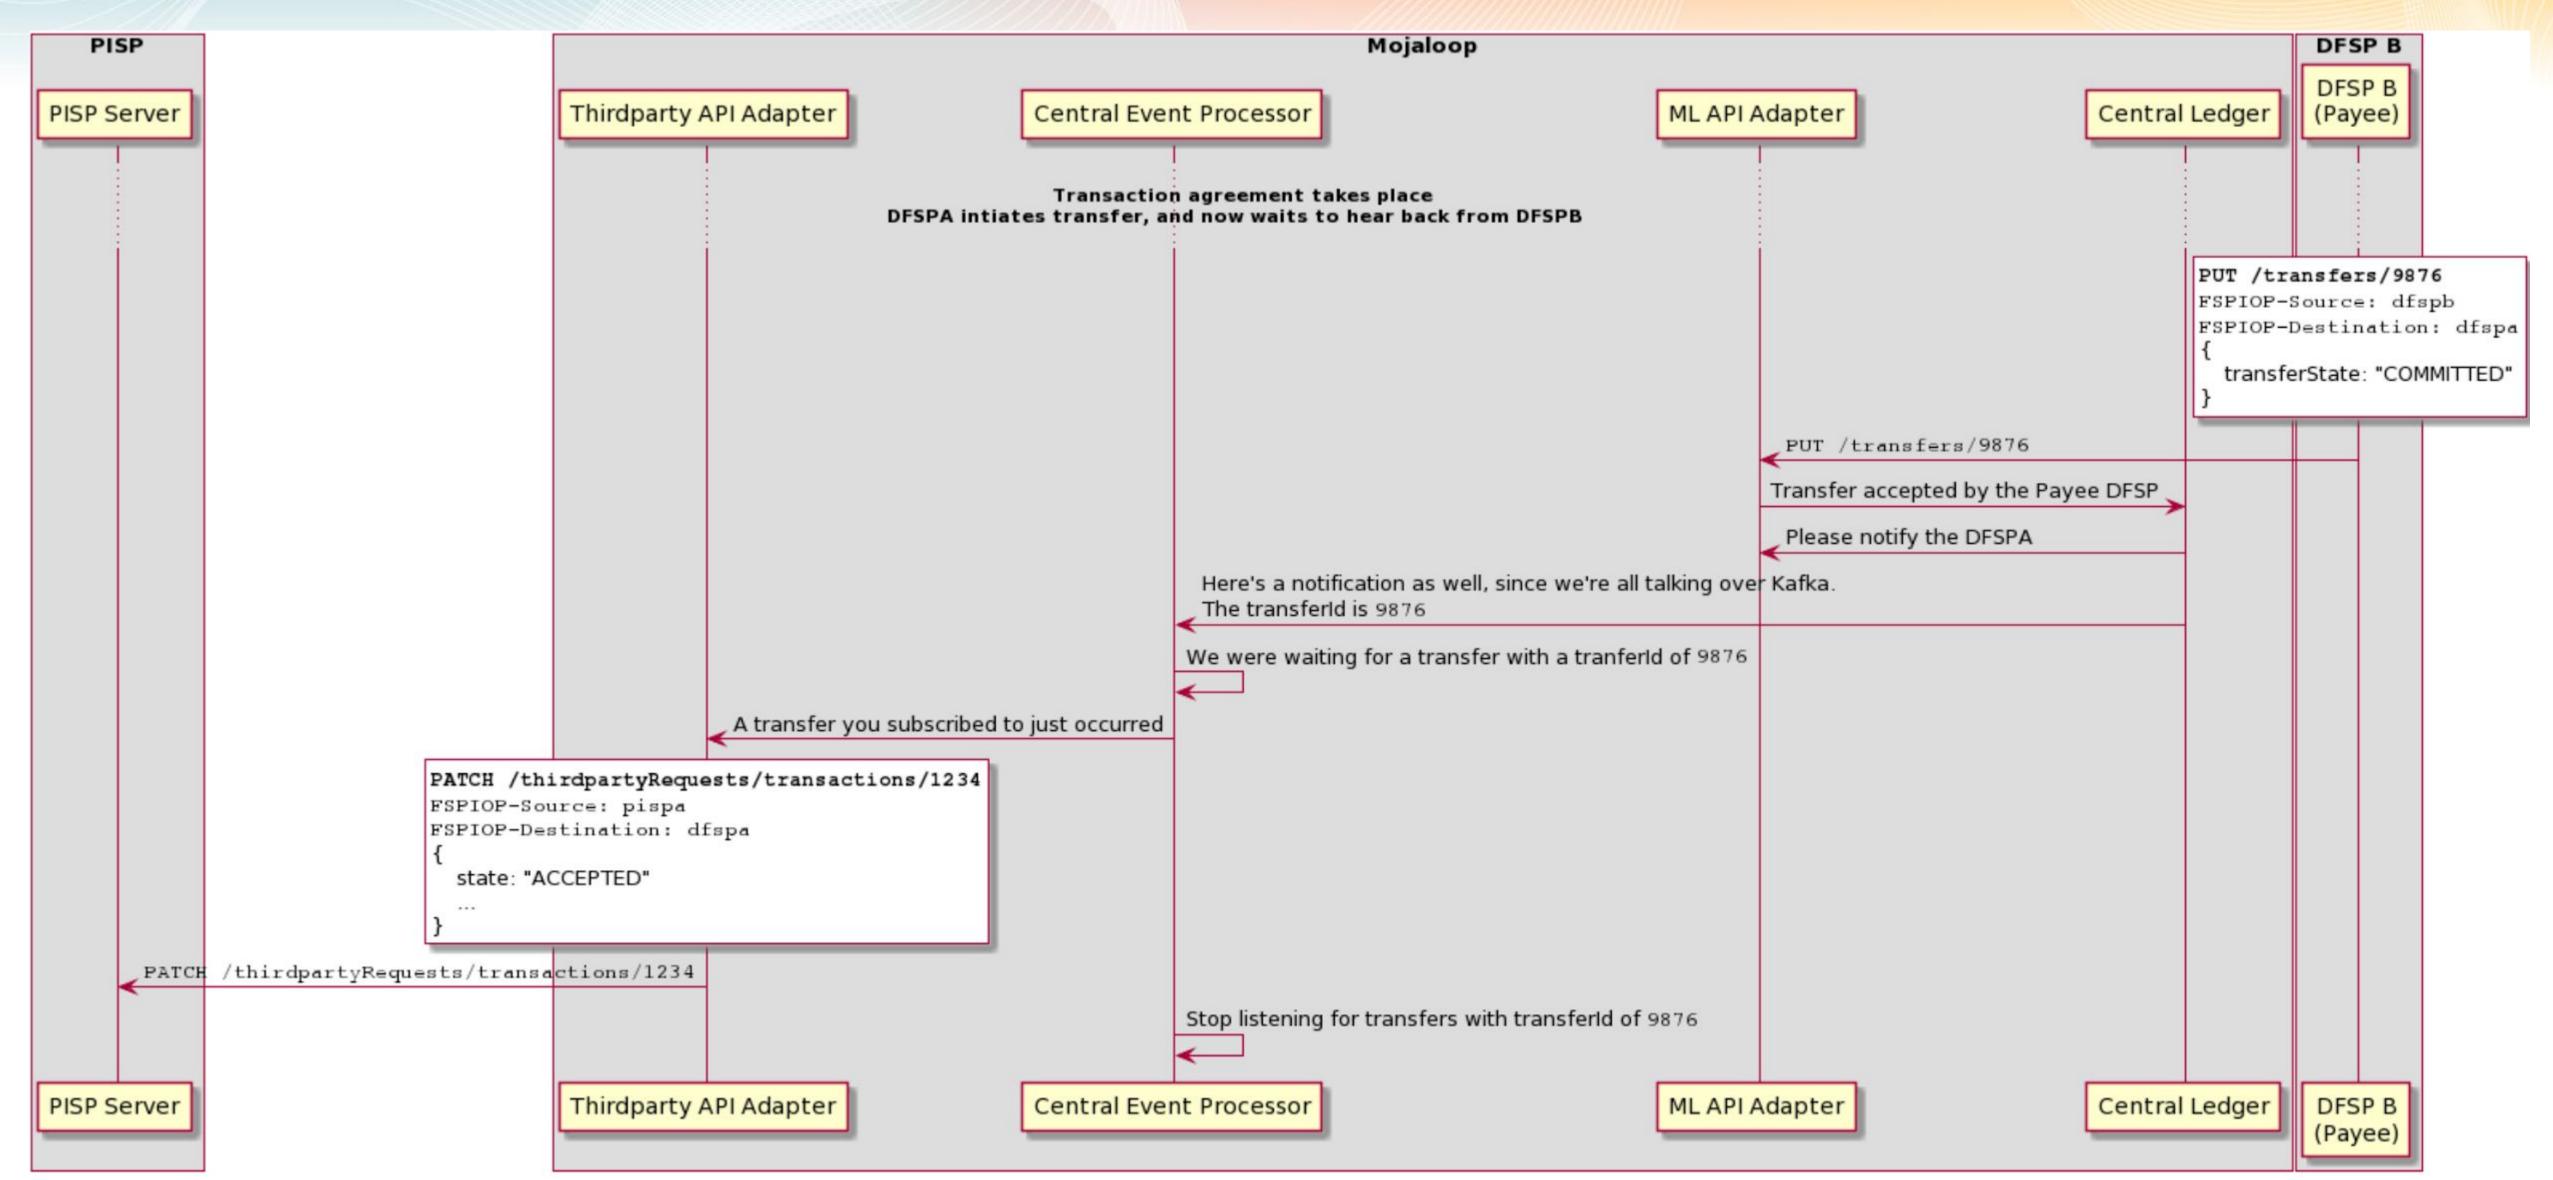

2. Gather Context

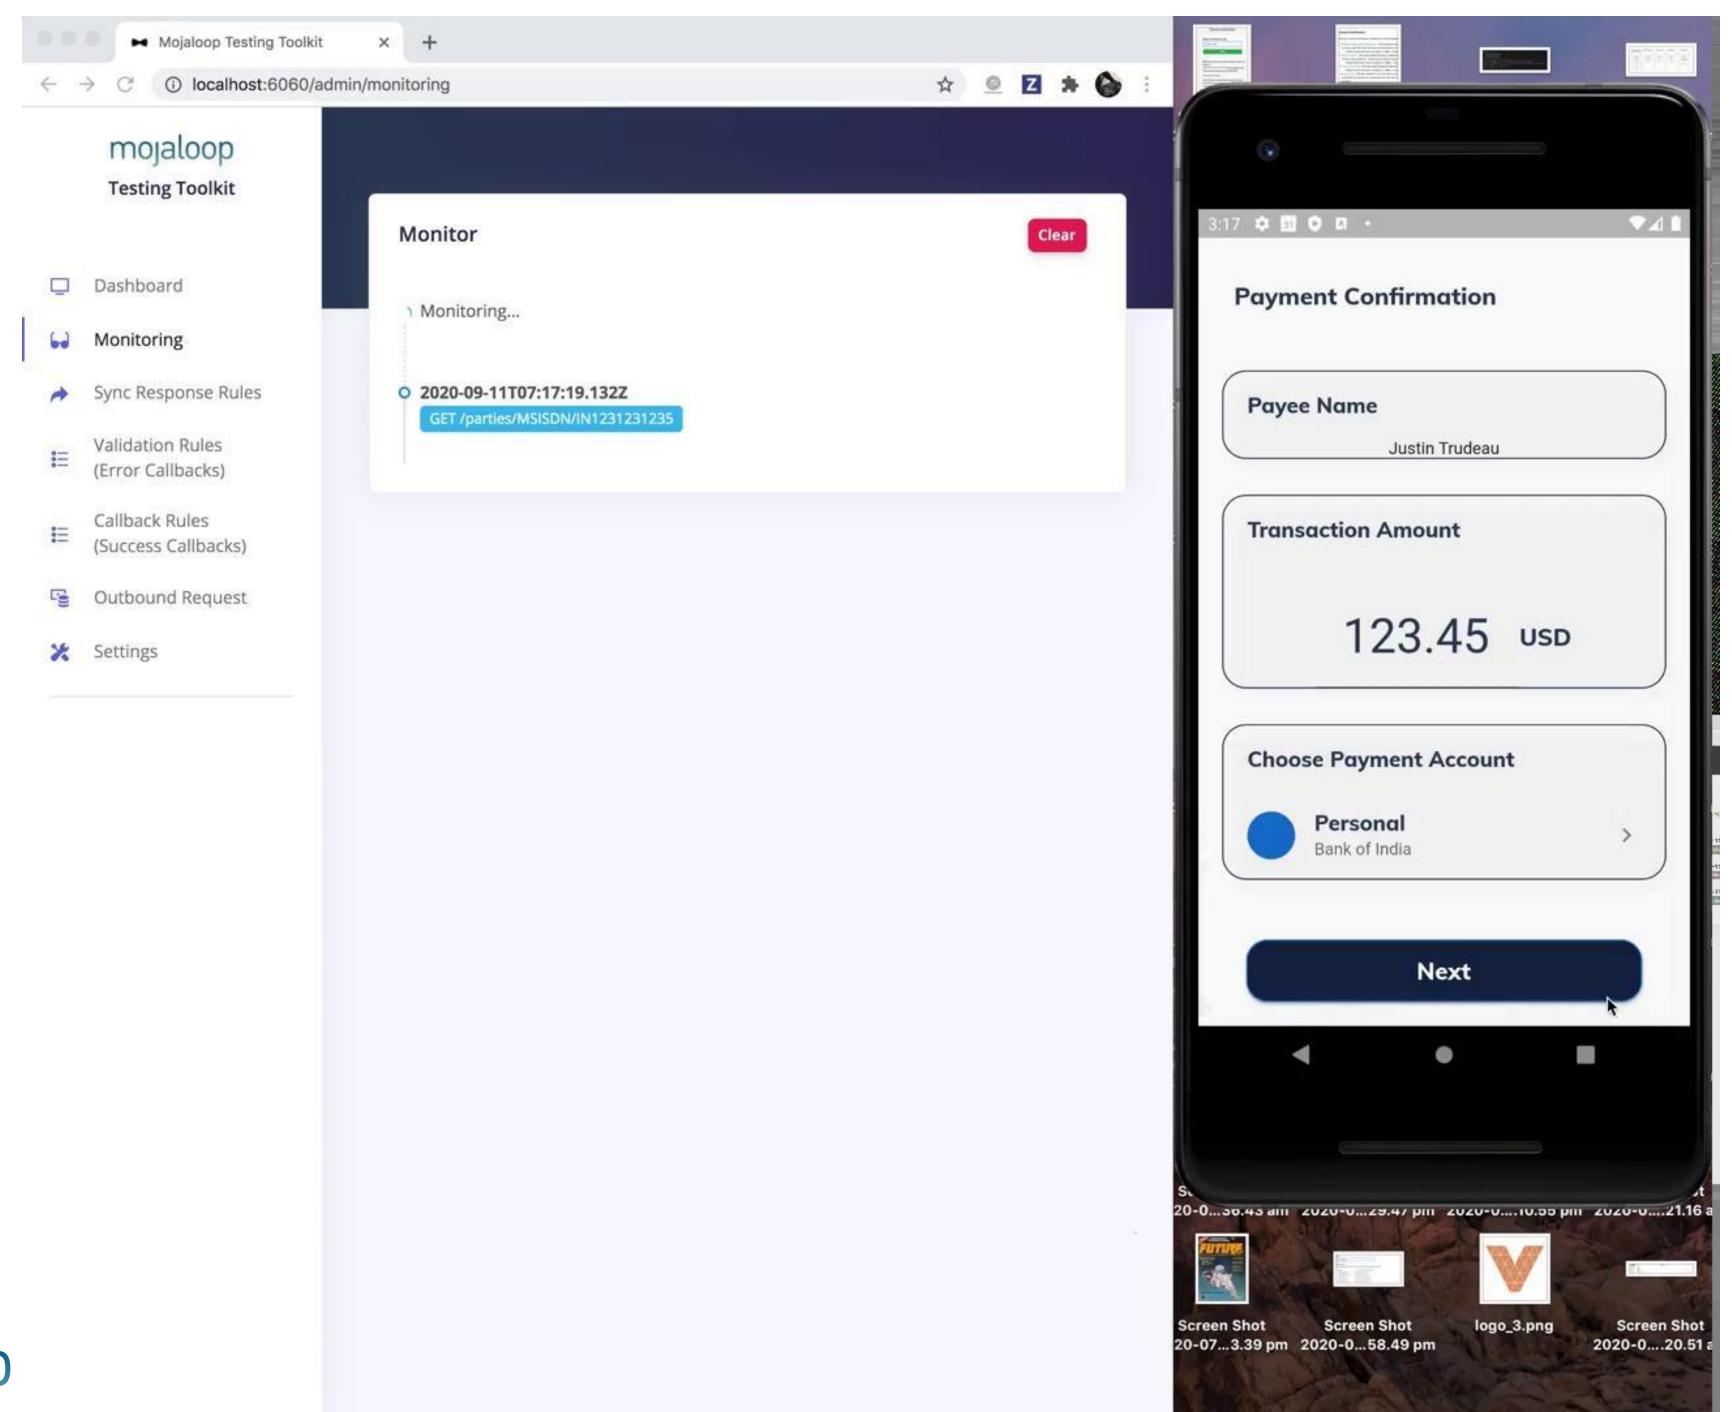

2. Gather Context

3. Final Transaction Notification

Demo App + Testing Toolkit

Plan for the rest of P111

- Go to DA with our Transaction Notification Design
- Continue working on our Objectives
- Recruit more contributors (20% folks at Google)
